

Name: \_\_\_\_\_

### Play a simple probability game.

On the chart below, put your name and the names of family or friends (no more than five people).

Each person should choose numbers from 1 to 6. Make sure all the numbers from one to six are chosen. Some people will have more than one number if there are only a few people playing.

Roll the one dice one hundred times. Give a mark to the person whose number comes up in the roll.

Who wins? On the back of this paper, write down who wins and why you think they win. Play again, record on another sheet if you want.

<b>Name:</b>	<b>Numbers they have chosen</b>	<b>Score:</b>
